

Asset Management and Change Tracking Software

Web Browser

FindIT brings up-to-date IT inventory information to your fingertips anytime, anywhere:

- Auto inventory of IT resources and non-discoverable fixed assets
- Daily change reports for hardware, software, patches and licenses
- View assets by location, department, project/owner
- Auto application discovery and metering – detect applications installed on servers and track software usage within a corporation to control licensing cost and compliance
- Daily and weekly reports for system usage, availability and general health.

FindIT Components:

Server: Requests and receives data from FindIT Agents, archives it into a Microsoft SQL Server database, then generates inventory/change reports, which can be viewed from a browser on any corporate desktop.

Agents: Run on each monitored node. Gather and send inventory and availability information daily to FindIT Server. FindIT is a web-based enterpriselevel Asset Management and Configuration Change Tracking Software. It provides centralized and automatic inventory control of system hardware, software and licenses. In addition, its flexible design allows you to track and report non-discoverable fixed assets such as hand held devices, mobile phones, printers, fax machines etc. Assets can be grouped by their location, department, project and/or owner. They may be assigned predefined or custom properties.

IT professionals can make timely and informative business decisions using FindIT inventory and change reports. FindIT automatically detects applications on corporate servers, tracking software licenses for compliance. Its unique Application Metering feature can provide frequency of application usage on any server, helping to reduce software licensing and support cost by removing applications that are not frequently used on corporate servers.

FindIT provides enterprise level reports such as – number of servers by platforms, available vs used processing power or storage space, most and least utilized servers to balance workload.

Key Features and Reports

Easy to Use

FindIT is easy to install and use. It can be installed on any IT Server with just a few clicks. Its web-based interface can easily navigate you to provide detailed inventory based on location, department/project etc.

Application Discovery and Software Metering

FindIT can easily detect which applications are running on which servers. Its advanced feature – Application Metering, can provide frequency of application usage on servers. This powerful feature helps you to identify the applications that are not frequently used and can be removed thereby saving on support and maintenance costs.

Detailed Inventory and Change Reports at Your Fingertips

FindIT can provide you with detailed hardware configuration, installed software licenses and patches applied for any server within a corporation. It will track and provide a list of all changes to any IT resources on a daily basis.

Enterprise Level Reports

FindIT provides many reports summarizing inventory. You can find total number of servers by location, department, application and platform. For each of these categories you can find the least and most used utilized servers, balanced or unbalanced workload within each platform, available vs used storage space, system uptime and availability reports.

Minimum FindIT Server Requirements:

- Intel Pentium III 700 MHz or faster
- ♦ 512 MB Memory
- ♦ 10 GB Hard Disk
- Windows NT or 2000 Server
- Microsoft SQL 2000
